Continuous Compliance for Critical Infrastructure

Context GRC™ Executive Brief

Version 1.2 | October 2026

Compliance programs fail between audits—especially in spreadsheets. Policies change, assets are added, evidence expires, and risk registers go stale. Context GRC™ is a continuous compliance platform for electric, water, oil and gas, and defense industrial base operators. It runs inside your network and uses a central **Drift Engine** to route every change to the people who own it. Purpose-built for NERC CIP and critical frameworks, with automation where every AI-proposed change waits for a named, authenticated reviewer before it takes effect.

Why Context GRC

- **Continuous, not periodic.** Thirteen drift engines (six positive, seven negative) run per context, and every run is recorded.
- **Built for cyber-physical environments.** 14 asset types, 11 regulatory traits, and ERT workbook exports.
- **Content and harmonization you can start with.** 40 frameworks, including all 15 NERC CIP standards, 7 prepackaged NIST OLIR crosswalks, 1-click evidence inheritance, and automated OLIR control mapping drift scans.
- **Catalyst AI & Context Guardian Dual-Model Verification.** Local DoD-favorable models (Granite, Phi, Mistral-Nemo) with thinking modes, a full-screen workspace and dual-pane Policy Canvas, per-boundary AI Context Profiles, IBM Granite Guardian groundedness judging, automatic compliant alternative substitution (e.g. On-Premises MFA), Two-Key evidence auto-acceptance, and human approval before anything changes.
- **Air-gap ready and hardened.** On-premises containers, zero runtime calls to public content networks, Ed25519-signed worker tasks, least-privilege PostgreSQL RLS, and pre-persistence DLP screening.
- **Honest about alignment.** Designed to support your programs. It does not confer certification.

Capabilities at a glance

Module	What your team gets
Drift Engine	13 context-aware engines (6 positive, 7 negative), per-context toggles, run on demand
Asset Graph	ESP, PSP, SCI modeling, ERT Level 1 workbook export

© 2026 GoEvolve LLC, DBA GoEvolve Assurance. Context GRC™

Module	What your team gets
Frameworks & OLIR	40 frameworks, 69 crosswalk mappings, 1-click evidence inheritance, OLIR mapping drift
Policies & Controls	Five ingestion channels, 4-touchpoint HITL triage, AI-proposed controls approved by people
Evidence Hub	Encrypted storage, direct requirement mapping (`CONTINUITY_RETAINED`), expiry tracking, recycle bin
Risk	Financial loss modeling, 5×5 heatmap, EBIOS RM
Action Center	Kanban, 8D and 5-Why root cause guidance, universal `Cmd+K` Command Palette
Audit Portal	Auditor workspace, ERT Level 2 overlay, audit log search

Offline Ed25519 license verification, context and seat tiering, a 14-day grace period into read-only archive mode, and a Free Auditor model are built in for air-gapped and connected deployments alike.

Context GRC supports customers' compliance programs; it does not itself confer certification or authorization.
